#### MOUNTING NECESSITIES

In order to be able to compensate an axial and radial misalignment of the shaft, the encoder flange must not be fixed rigidly. Fix the flanges by means of a stator coupling (e.g. hubshaft with tether) as torque support (see "Accessories") or by means of a cylindrical pin:

Dimensions in mm  
also apply for shaft-Ø 10 or 14  
Mounting = D, F (Clamping ring)  
Preparation of the machine flange<sup>1</sup>  
**(all mounting versions):**  
In the machine flange a straight pin must be installed (diameter 4x16 resp. 4x20, DIN 6325).  
This pin is required as a torque support.

**1 Or as an option: stator coupling as torque support**

Dimensions in mm  
also apply for shaft-Ø 10 or 14  
Mounting = E (mounting with center screw)  
Preparation of the drive shaft  
**(only in mounting = E):**  
The drive shaft must be provided with a threaded bore M 4 x 10:  
This bore accepts the fastening screw of the shaft encoder.
