Differential pressure measuring and switching device

09005784 • DB_EN_DS11 • Rev. ST4-A • 04/20

1 Product and functional description

1.1 Delivery scope

- Differential pressure measuring and switching device DS11
- Operating Manual

1.2 Performance characteristics

Typical applications

- Differential pressure measurements between the supply and return in heating systems.
- Monitoring of filters and pumps

Important features

- High repetition accuracy of the switch points
- Long life span
- High overload protection
- Lost of application options

1.3 Intended use

The DS11 is a combined display and switching device for differential pressure, over and under-pressure for gaseous and fluid media. This series is ideally suited for various measuring tasks in rough environments.

Typical applications are measuring differential pressure between the supply and return in heating systems and monitoring filters and pumps.

Please contact the manufacturer before using this unit with dirty or aggressive media because the unit needs to be adapted in terms of the parts that come into contact with the media.

The device can be used as a functional safety components (SIL) as agreed with the manufacturer (see order code).

The device is to be exclusively used for the applications agreed between the manufacturer and the user.

1.5 Design and mode of operation

A sturdy non-sensitive diaphragm measuring unit that is suitable for measuring differential pressure, and over and under-pressure is used as a measuring system. The unit uses the same measuring principle for all three measuring applications.

In the rest position, the spring forces on both sides of the membrane are balanced out. Due to the pressure or under-pressure to be measured, a single-sided force is created on the membrane which shifts the membrane system against the measurement range springs up to compensation of the spring forces. In case of overload, the membrane supports against the metallic support surfaces.

A centrally positioned tappet transfers the movement of the membrane system on the motion train and operating elements of the micro-switches.

Rated pressure of the measuring system	25 bar
Test pressure	1.5 times the rated pressure
Zero-point setting	Arranged in the front panel of the scale
Measuring accuracy	± 2.5% of the upper range value

2.3 Output parameters

Switch contacts	1 to 2 micro-switches
Switching function (per contact)	Changeover contact
Switch point setting	Can be set to reference scales from outside
Smallest settable value	5% of the upper range value
Switch hysteresis	2.5% of the upper range value

Per contact	AC	DC
Switching voltage	250 V	30 V
Switching current	5 A	0.4 A
Switching output	250 VA	10 W

2.4 Operating conditions

Increase ambient temperature	-10 ... +70 °C
Media temperature	-10 ... +70 °C
Storage temperature	-15 ... +75 °C
Enclosure protection class	IP55 or IP65 acc. to EN 60529 depending on model

DZ11	Installation set for retrofitting from wall mounting to switch panel installation. Please state the precise device type of the DS11 because there are different switch panel installation sets depending on the model.
DZ23/24	<p>The shut-off valve DZ23 in a three spindle model and DZ24 in a four spindle model can be particularly beneficial when mounting the differential pressure measuring and switch device DS11.</p> <p>The following can be used for example:</p> <ul style="list-style-type: none">• is a system is to be depressurized or taken out of operation• for repairs or tests to disconnect differential pressure devices within the affected systems from the mains supply <p>The shutoff devices can therefore also be used for function tests on site. In contrast to DZ23, the DZ24 also has a venting valve to vent the connected pipe system. The shut-off and venting valves are designed for the rated pressure level PN40. The housing can be selected in aluminium, brass or chrome-nickel-steel 1.4301. There are various pressure connections available for process-side screw connections or connection threads.</p>
