

Pmag

electromagnetic induction flow measurement

Pmag flowmeters are particularly suitable for all types of wastewater measurements. A various types of lining material are available to suit chemically aggressive liquids or with suspended solids. A salient feature of the soft rubber lining is the resistance to abrasion due to water with suspended solids.

- Compact digital system, for conductive liquids ($>5\mu\text{S}/\text{cm}$), even with a limited content of suspended solids
- Measurement range: from $<0,1\text{m}^3/\text{h}$ to $>28000\text{m}^3/\text{h}$
- Typical measurement accuracy: $\pm 0.5\%$ ($\pm 0.2\%$ optional)
- Power supply $85\div265\text{Vac}$, 24Vdc , 12Vdc
